MARK A. BLAHA II

Cybersecurity · Business Development · Automation
Dallas - Fort Worth, TX | linkedin.com/in/markblaha | github.com/realmbs

Cybersecurity graduate (4.0 GPA) with an adversarial mindset and a builder's habit: a serverless AWS threat intelligence platform as my capstone, and an AI automation system that runs a full business development cycle solo at Procertas. Pursuing graduate study in cybersecurity to ground the practice in research.

EDUCATION

Bachelor of Applied Technology in Cybersecurity | Collin College, Frisco, TX Dec 2025
GPA: 4.0 | *summa cum laude* | President's List (2023–2025)
Relevant Coursework: Penetration Testing, Virtualization & Cloud Security, Cyber Defense Operations, Cryptography, Digital & Device Forensics, Information Assurance

EXPERIENCE

Business Development Associate | Procertas, LLC Jan 2025 – Present

- Run the full business development cycle solo (no sales team) for a legal technology training company, and built the AI automation system that runs it: custom workflow "skills" on Claude / Cowork with MCP integrations to Zoho CRM and Microsoft 365, where nothing sends or writes to the CRM without my approval
- Booked 28 product demos and closed 3 deals so far in 2026 (peak of 10 demos in a month) through a personalized cold email cadence I send every Tuesday and Thursday
- Researched 1,400+ qualified decision maker leads using automated OSINT sourcing with email inference, confidence tiering, and fuzzy matching across two sources for deduplication

PROJECTS

Serverless Threat Intelligence Platform | Senior Capstone Aug–Dec 2025

- Built a cloud native AWS platform (Lambda, DynamoDB, S3, API Gateway) that collected and processed 32,000+ IOCs from live OSINT feeds for $0.82 over 30+ days of continuous uptime
- Built three Python Lambda functions (STIX 2.1 normalization, Shodan API enrichment, SHA-256 deduplication) with least privilege IAM, AWS Secrets Manager, and encryption in transit and at rest; source at github.com/realmbs/senior-project

Network Security & DNS Management Jul 2025

- Deployed a Pi-hole DNS sinkhole on a Raspberry Pi 5 that blocks 1M+ malicious domains, with real time Slack webhook monitoring and Bash automation

TECHNICAL SKILLS

Security: Kali Linux, Burp Suite, Metasploit, Nmap, Wireshark, OpenVAS, OSINT, MITRE ATT&CK, STIX 2.1
Cloud & IaC: AWS (Lambda, DynamoDB, S3, API Gateway, IAM, Secrets Manager, CloudWatch), Terraform, serverless
Automation & Data: Claude / Cowork, MCP integrations, Zoho CRM, fuzzy matching, HTML email campaigns
Development: Python, TypeScript, Bash, PowerShell, Git/GitHub, REST APIs
Frameworks: NIST CSF 2.0, NIST RMF, PCI-DSS v4.0, COBIT 2019, ISO 27001

CERTIFICATIONS

Google Cybersecurity Professional Certificate (2024)
